Index CFDs Product Specifications

Indices have the advantage of allowing traders to take a wider view of a basket of stocks rather than a view of one individual stock alone. A stock index is a good indicative measure of market performance. Indices such as the FTSE 100 and USTEC index are baskets of blue chip stocks listed on the exchange and are generally a good measure of the current market sentiment. A change in the performance of any constituent stock in an index is reflected in a change in the overall value of that index.
